CLEARANCE

Agent Authority Record

What this Agentforce agent is allowed to do, as written in its Agent Script file, checked against fixed rules and sealed.

SAMPLE. Sealed with a demo key, not a CLEARANCE production key. The agent is Salesforce's own public sample, assessed as published.

Result

Blocks go-live	Needs a decision	Actions the agent can call	Hand-off routes
2	2	2	0 of 1 needed

Not ready for go-live as written. The agent can offer to pass a guest to a person, but no route to a person is configured, and the user it runs as has not been set.

Agent assessed

Item	Value
Agent	Local Info Agent (Local_Info_Agent)
File	Local_Info_Agent.agent
Source	Salesforce sample agent, github.com/forcedotcom/afdx-pro-code-testdrive (commit 5fc6ead), Apache-2.0
File fingerprint (SHA-256)	`7a4ca9ac2dc666c0c0574dac3a836287c2c7257d71510498778587b7e447a5f5`
Assessed	2026-10-17 10:24 UTC
Method	Salesforce @sf-agentscript/agentforce 2.10.38 compiler + AAR-rules 0.1.0, no LLM

What the agent can do

Every action that reaches outside the conversation, who decides when it runs, and what limits it.

Subagent	Action	Calls	Decided by	Condition
local_weather	check_weather	`apex://CheckWeather`	LLM	None
resort_hours	get_resort_hours	`flow://Get_Resort_Hours`	LLM	None

Hand-off to a person: 1 hand-off action (escalation.escalate_to_human), 0 configured route.

Findings

Rule	Status	Finding	Detail
H1	Blocks go-live	Hand-off to a human has no route	1 hand-off action(s) (escalation.escalate_to_human) but no connection block naming an outbound route. Salesforce documentation states escalation needs a connection messaging block with outbound_route_type and outbound_route_name.
A1	Needs a	LLM can call check_weather	local_weather.check_weather calls

Rule	Status	Finding	Detail
	decision	with no condition	apex://CheckWeather. No "available when" condition limits when the LLM may call it.
A1	**Needs a decision**	LLM can call get_resort_hours with no condition	resort_hours.get_resort_hours calls flow://Get_Resort_Hours. No "available when" condition limits when the LLM may call it.
A2	**For the record**	LLM fills inputs to check_weather	Inputs set by the LLM: dateToCheck.
A2	**For the record**	LLM fills inputs to get_resort_hours	Inputs set by the LLM: activity_type, day_of_week.
U1	**Blocks go-live**	Run-as user not set	default_agent_user is "UPDATE_WITH_YOUR_DEFAULT_AGENT_USER". The agent's permissions come from this user, so it must be a real, named user before go-live.

What clears each finding

- **H1:** add a connection messaging block naming the Omni-Channel route (outbound_route_type and outbound_route_name), then re-run.
- **U1:** set default_agent_user to a real, named user with only the permissions this agent needs.
- **A1:** either add an "available when" condition, or record that the business accepts the LLM deciding when to call the action.
- **A2:** no change needed. Recorded so reviewers know which values come from the LLM.

Seal

Any change to the agent file changes its fingerprint, so this record no longer matches and the agent must be re-assessed. Any change to this record breaks the signature.

Item	Value
Rules version	AAR-rules 0.1.0
Scheme	Ed25519
Key ID	DEMO-2026-10 (sample only, not a CLEARANCE production key)
Record fingerprint (SHA-256)	`c1d762faf6a6f4d19bc405d5a3e20528d1d16f871500eb22f2a40739d9398974`
